

UNUS #Y2-0399-UNI
Case No. F7545(V)

REMARKS

Reconsideration of the application, as amended, is respectfully requested.

Claims 6 and 10-13 have been amended to correct the informalities noted by the Office.

Claim 14 has been amended to recite the preferred subject matter from claim 6 considered by the Office to be an informality.

Claim 1 has been amended to incorporate the subject matter of claim 2. Claim 2 has, therefore, been canceled without prejudice. The oil phase range can be taken from page 8, lines 23-24.

Christophersen et al. us patent no. 6,090,421 is directed to a sprayable emulsion for browning which includes 80-97% of a fat or oil phase, 3-20% of a water phase, and a browning agent dissolved or dispersed (mainly) in the water phase. In contrast, claim 1 is directed to a sprayable emulsion having a much higher percentage of water phase. The Office points to no teaching in Chistophersen et al. of such a sprayable emulsion for browning. Moreover, the present invention affords a sprayable emulsion which is less caloric and less expensive.

In view of the foregoing, it is respectfully requested that the application, as amended, be allowed.

Respectfully submitted,

Gerard J. McGowan, Jr.
Attorney for Applicant(s)
